TITAN Outrigger Platform (OP), Designed for Hoisting Safety

TITAN has recently added the TITAN Outrigger Platform (OP) to its line of formwork equipment. The TITAN OP is a fully assembled platform, designed to compliment TITAN's equipment, reduce jobsite labor expense, and enhance safety. This lightweight TITAN OP supports loads up to 4,000# pounds and positions loads outside the building's edge for safe crane access. The TITAN OP provides a heavy-duty, diamond-deck-steel floor (flush with the concrete floor) for smooth rolling of material onto the platform. The TITAN OP is quickly and securely mounted to the building with post shores or optional through-bolting.

TITAN'S OP:

- Is designed in full accordance with OSHA standards.
- Is painted "safety" red for easy recognition.
- Includes "snag-free" side walls.
- Has proper rigging to ensure a safe flying operation.

TITAN is an international shoring rental/sales company featuring innovative and efficient shoring solutions, including the popular TITAN HV system. TITAN HV is a pre-engineered, modular Drophead system with lightweight, interlocking aluminum beams providing maximum shoring flexibility. In addition, TITAN also offers the new TITAN MAX system for flying perimeter panels, high shoring or heavy applications. TITAN's vast US and Canadian inventory is supported by local sales staff and equips clients coast to coast with engineering, equipment management and training expertise.

Just another Way TITAN is "Equipping Builders to Succeed".
