HV FILLER BEAM™

TITAN's new HV FILLER BEAM™ is an innovative and sustainable approach to framing inevitable filler conditions on job sites and substantially reduces labor and material costs. This articulating beam design eliminates wood fillers, wood waste, and trash removal common on all shoring jobs. The new design provides a more secure bearing condition and promotes ground based installation.

The durable galvanized steel frame, stable wide interlocking ends, ergonomic hand grip, and plastic nailer can solve any shape filler condition in seconds.
