

The **XL Clip**, a new creation inspired by the needs of our clients, streamlines the process of extending shores. The standard four-bolt configuration typically used to attach the one meter extension to XL shores can be replaced with only two XL Clips. Load capacity is maintained while the clips are in use and the spring clip feature ensures the device will stay in place when attached. The clip's simple installation and removal requires only a hammer; no wrench or other tools necessary.
