

The all-new **Column Lock™** utilizes TITAN's patent pending asymmetrical design to save time, labor costs, and materials. Weighing only 5.5 lbs, it can be installed in minutes and allows for final deck grading after installation. When installed, it has a lateral capacity of 4,000 lbs (2.5:1 FS), achieving ACI recommended 2% dead load capacity without reliance on x-braces or plywood sheeting. One Column Lock™ pair replaces up to **eleven 3-post x-braces**, saving time and money on shoring system setup and improving overall floor access.

TITAN's patent pending asymmetrical design can also be used with TITAN's Universal Wedge Clamps and 2x4s located on all TITAN jobs. One Wedge Clamp Column Brace pair replaces up to **five 3-post x-braces**. When installed, it has a lateral capacity of 1,780 lbs (2.5:1 FS).
