

TITAN's patent pending **Drophead Clamp** is designed to optimize bracing by encouraging a top-to-bottom configuration. The Drophead Clamp allows only one ground-based worker to easily install braces, eliminating the need to use a ladder or scissor lift for shores #1-4 (up to approximately 14'). This tool also enhances efficiency by greatly reducing the number of ladders or scissor lifts required to install braces above 14' and offers a far swifter installation process than a traditional wedge clamp.
